Custom charting components (flex)

User interction & usability analysis
Complex Data visualizations
Wordpress Customization
Ink / charcoal Illustration

Print media layout & design
Product Package Design
Logo / Brand Identity Design
Flash based Animations

Work Experience

I have around 5+ years of experience in application development and Freelance Graphic designer. During this period I have had the opportunity of working on a wide verity of projects. My work involves delivering a solution right from the drawing board to requirement gathering, prototyping, task estimations, making of the first draft of POC (Proof of Concept), implementation and finally integration with the product. Along with client interaction with multiple feedback loops to deliver a good, clean & robust solution.

Guavus Network System

Designation: Sr MTS I
<http://www.guavus.com>
August 2007 – till date
Gurgaon, India

Guavus is a Startup with a revolutionary set of analytics solutions that changes the way businesses make decisions. Our patented zero-latency, multi-silo data analytics platform continuously mines gushing streams of network, application, and customer data with a singular objective: deliver instantaneous, actionable insights to manage costs and maximize profitability. The product has a java back-end and flex on the front-end which delivers a powerful, elegant and rich UI. My work involves creating mock ups, writing custom components, design and development of UI components, requirement gathering, estimating time-line, new widget development and improvements in existing framework and Developing Proof of Concept (POC) for various data visualization and over all look-and-feel of the front end.

Widgets built : Traffic timeseries, Interactive network Topology, Dashboard, Heat map, Diagonal bar charts, Dynamic datagrid, Task wizard, Traffic gauge etc.
